RESEARCH INTERESTS

I work toward **calibrated human-AI interaction**. Embodied AI, such as automated vehicles and service robots, increasingly acts in everyday life. Its effectiveness, people's acceptance, and safe use often depend on human experience, such as trust, mental workload, and perceived safety. These experiences can have an appropriate range, which may depend on the person, the AI, and the situation. For instance, human experience can be inappropriate to the AI's actual capabilities, as in undertrust or overtrust, and the AI's behavior can be inappropriate to the person's preferences.
Interfaces that mediate (i.e., add, remove, or modify) information might calibrate human-AI interaction. However, people differ, and both people and AI change. Therefore, my research follows two principles. With *homeostatic adaptation*, the interface mediates information differently when human experience leaves its appropriate range, until it returns. With *hormetic doses*, the interface reveals the AI's limits one at a time, which can move human experience toward the AI's actual capabilities. Toward these principles, I develop human-in-the-loop optimization methods that personalize interfaces based on ratings, physiological signals, and behavior, as well as mediated reality systems and study platforms. My application areas are automated vehicles, urban air mobility, robots, and extended reality.

EDUCATION

Ulm University, Ulm, Germany 06/2021 | present
PhD Candidate (Dr. rer. nat.) in Human-Computer Interaction
Thesis Title: *Toward Computational Human-Vehicle Interaction Design: From Design-Problem Formulation to Human-in-the-Loop Optimization*
Advisor: Prof. Dr. Enrico Rukzio
Committee: Prof. Dr. Antti Oulasvirta (Aalto University, Finland), Prof. Dr. Philipp Wintersberger (IT:U Linz, Austria)
Submitted in 07/2026; Defense scheduled for 17.11.2026

University College London, London, UK 01/2025 | 03/2025
Visiting Research Scholar with Prof. Dr. Mark Colley

Ulm University, Ulm, Germany 04/2018 | 05/2021
Master of Science in Media Informatics Overall Grade: 1.1, with Distinction - A-equivalent
Thesis Title: *SwiVR-Car-Seat: Utilizing a Motorized Swivel Seat to Explore Effects of Vehicle Motion on Interaction Quality in Virtual Reality Automated Driving* Grade: 1.0 - A-equivalent

Ulm University, Ulm, Germany 10/2014 | 03/2018
Bachelor of Science in Computer Science
Specialized Subject Area: Biology

JOB EXPERIENCE

Ulm University Ulm, Germany
Research Associate 06/2021 | present
I significantly contribute to research and teaching. Also, I played a key role in co-leading and implementing the externally funded project *SituWare*. Furthermore, I successfully endorsed novel topics in immersive data visualization and computational methods for inclusion in the department's research scope. My work incorporates numerous research approaches such as experiments, interviews, focus groups, literature reviews, observation, usability testing, & dataset creation. It has led to over **25 peer-reviewed full papers**.

Zefwih GbR Neu-Ulm, Germany
Co-Founder & Managing Partner 01/2022 | present
At Zefwih, I lead business and research strategy while contributing to developing desktop, mobile, and virtual reality user-centered applications for commercial, cultural, and research scopes. I also consult on early-stage digitalization projects, leveraging iterative design processes and HCI principles to encourage sustainable innovation. This experience refined my skills in HCI research from an industrial perspective, interaction design consultation, and project collaboration.

Ulm University Ulm, Germany
Student Research Assistant, Institute of Media Informatics 06/2019 | 02/2021
I contributed to the ideation and development of a multi-user, shared-content augmented-reality platform and eye-tracking applications for virtual reality. This involved literature research, designing studies, and contributing to multiple publications. I also supported multiple lectures and exercises, tutored students during course projects, and evaluated their coursework.

Ulm University Ulm, Germany
Student Research Assistant, Institute of Communications Engineering 12/2018 | 03/2019
I led the ideation and development of voice-assistance applications in dialogue systems engineering, conducted literature research, and supported publication work. Additionally, I actively participated in internal review processes.

GRANTS, ACADEMIC AND INDUSTRIAL SUPPORT

Personal and Project Funding

- *Startup Your Career* support (€10,000) by the Graduate & Professional Training Center, Ulm University
- Supported by the Mobility Program of Ulm University (€2,800)
- Supported by the German Federal Ministry of Transport and Digital Infrastructure (€25,000)

Contribution to Research Grant Acquisition

- DFG Research Grant (Sachbeihilfe), German Research Foundation: *Computational Optimization of In-Vehicle User Interface Design for Calibrated Trust and Maximized Usability and Safety* (€388,213); PI: Prof. Dr. Enrico Rukzio
  Substantial contribution to the conception and writing of the proposal; the project builds on my doctoral research on computational human-vehicle interaction design

SERVICE and VOLUNTEERING ACTIVITIES

Associate Chair / Program Committee Member

- Full Paper - AutomotiveUI '24 '25 '26, MuC '24 '25, CHIWORK '25 '26, **CHI '26 '27**
- Member of the **Best Paper Award Committee** for **CHI '26**
- Late-Breaking Works (LBW) - CHI '23 '24 '25

Organizing Committee

- AutomotiveUI 2023 (Registration Chair)
- MuC 2026 (Student Research Competition Chair)
- Co-Organizer of the Post-CHI Summer School On Automotive User Interfaces and Future Mobility
- Co-Organizer of the German Pre-CHI 2022 hosted in Ulm, Germany with more than 70 participants

Editorial and Journal Service

- **ACM Transactions on Computer–Human Interaction (TOCHI)** – Distinguished Reviewer Board (since 2026)

Peer Reviewing

Over 250 peer reviews completed so far for AutomotiveUI, VRST, **CHI**, IDC, ICWSM, GLS, MobileHCI, IMX, ETRA, COGAIN, CogSci, DIS, EICS PACM, CHI Play, ISS, ISMAR, Creativity & Cognition, MuC, NordiCHI, ICIS, OzCHI, ISWC, IEEE VIS, ICMI, HAI, PacificVis, **CSCW**, **UIST**, TEI, **IMWUT**, **TVCG**, **TRF**, and BIT

Student Volunteer: CHI 2023, MuC 2025

TEACHING

Design Thinking for Interactive Systems
Course Organizer: Co-organized an interdisciplinary project emphasizing user-centered design and design thinking, undertaken as a year-long, research-driven group effort culminating in several publications. Fall 2021 | Spring 2025

User Interface Software Technologies
Course Organizer and Lecturer: Led the development of course materials and delivered a weekly (interactive) lecture on designing user interfaces and interaction technologies, emphasizing a user-centered design process. Starting with the basics of interactive systems, the course explored interface design, various media, and formal HCI methods. I co-led the evaluation process by grading the final exam and ensuring a fair, thorough assessment of student performance. Spring 2022 | Spring 2024

Automotive User Interfaces and Interactive Vehicle Applications
Course Organizer and Lecturer: Led the development of course materials and held a weekly (interactive) lecture on practical insights on developing and researching automotive user interfaces, teaching the user-centered design process. Delivered a yearly in-depth lecture on future mobility research and computational methods for automated vehicle user interface design. Co-led the evaluation process by grading the final exam and ensuring a fair and thorough assessment of student performance. Fall 2021 | Fall 2025

Research Trends in Media Informatics
Course Organizer: Co-organized the course, mentored PhD students on course structure and content, and provided detailed one-on-one instruction to over 10 students in conducting literature surveys using the PRISMA method. Additionally, took an active role in assessing and grading students' work. Fall 2021 | Fall 2024

Technical Foundations of Media Development
Lecturer and Course Contributor: Supported continuing-education students in developing technical foundations for interactive systems design, including software development, prototyping workflows, debugging, and interaction implementation. The course required accessible explanations for students with heterogeneous professional backgrounds while maintaining the technical and methodological standards expected in media informatics and HCI. Spring 2023 | Spring 2026

THESIS SUPERVISION (Excerpt, Total>30)

Bachelor Theses

- Tim Eckstein (Ulm University; 2026)
- Hermann Fröhlich (Ulm University and PlanB. GmbH; 2024)
- Nam Anh Le Cong (Ulm University; 2024)
- Julius Schürrle (Ulm University; 2023)
- Benno Hölz (Ulm University; 2023)
- Oliver Schmid (Ulm University; 2022)

Master Theses

- Julian Britten (Ulm University; 2025) **now PhD student at Ulm University**
- Sepide Ansari (Ulm University and Spiegel Institute Mannheim GmbH; 2025)
- Mugdha Keskar (Ulm University; 2024)
- Svenja Krauß (Ulm University; 2023)
- Alexander Häusele (Ulm University; 2023)
- Alexandra Nick (Ulm University and Cerence GmbH; 2023)

INVITED TALKS and LECTURES

- TU Hamburg Institute for Ethics in Technology (08.06.2026): "Low-Cost High Fidelity Simulators for Interaction with Future Mobility"; online; invited by Jan Hölzer
- UCL Interaction Centre (04.03.2026): "From One-Size-Fits-All to Preference-Based Interactions with Technology"; *Future Interfaces Course*; in-person; invited by George Chalhoub
- UCL Interaction Centre (13.02.2025): "Ubiquitous Personalization"; *Future Interfaces Course*; in-person; invited by Mark Colley

AWARDS and NOMINATIONS

Outstanding Reviewer Recognition: ISS '22, AutomotiveUI '22 '23 '25, DIS '23, IEEE VIS '23, CHI '24 LBW, CSCW '24, MuC '24, UIST '24 '25 '26 (x2), IMWUT '22 '24 '25 '26, and CHI '24 (x2) '25 '26
I have received **21 Outstanding Reviewer Recognitions**, demonstrating my commitment to excellence in academic review processes. These recognitions reflect my deep understanding and critical thinking skills, which enable me to advance scholarly discourse.

Open Data Award at AutomotiveUI '26 - DOI: 10.1145/3828157.3828774
This work designed and implemented a visual and auditory communication concept for people with visual impairments seated inside fully automated vehicles. An online video-based study (N=35, 12 with visual impairments) compared three levels of auditory information. Trust and user experience improved with additional information, and information saturation was reached at the medium level. The award recognizes the openly shared study materials, data, and analysis.

Honorable Mention Award at MUM '25 - DOI: 10.1145/3771882.3771888
This work advances flexible, space-efficient interior design through *AirClick*, a modular system of interactive inflatables that enables rapid, on-demand room transformation. In a lab study (N=20) across four scenarios, participants successfully reconfigured spaces using the *AirClick* modules. Findings demonstrate suitability for everyday environments with low to medium robustness demands, highlighting AirClick's potential for customizable, space-saving room adaptation.

Honorable Mention Award at CHI '25 - DOI: 10.1145/3706598.3713514
This paper addressed the challenge of scalable automotive user interface design. We implemented *OptiCarVis*, a system integrating Human-in-the-Loop Bayesian Optimization. An online study (N=117) demonstrates the efficacy of *OptiCarVis* in significantly improving trust, perceived safety, and predictability, without increasing cognitive load.

Young Talent Award Nominee at German Computer Game Awards '21
With "The Social Engineer", I was nominated for the Young Talent Award at the German Computer Game Awards '21 — the largest national competition for digital games in Germany. The same project was also a finalist for the **Best Student Game Award** at the internationally recognized Games for Change Awards '22, and was subsequently nominated for the **nextReality.Contest '22** in the "Young Talent" category, a major German competition for immersive media innovation.

Audience Choice Award at CHI PLAY '20 - DOI: 10.1145/3383668.3419917
As technical attacks become increasingly difficult to execute, social engineering exploits the human element in information security, often going undetected and resulting in high organizational costs. To address this, I led the ideation and development of "The Social Engineer", an immersive VR game designed to raise awareness by letting players experience various social engineering methods in a simulated company environment. This extensible tool can serve as employee self-training, aid security experts in teaching awareness, and provide consumer engagement.

SKILLS

- **Research:** Proficient in **quantitative analysis** using R (parametric/non-parametric data, linear regression, hierarchical models) and **qualitative analysis** following Saldaña's guidelines
- **Coding:** R (data analysis, visualization, web scraping), Python (computational modeling), Java, and C# (particularly with **Unity**)
- **Fabrication & Engineering:** Experienced in 3D printing, electrical engineering, and microcontroller programming (Arduino, Raspberry Pi)
- **Sensing Technologies:** Adept at using physiological sensors (eye-tracking on desktop/head-mounted display, wearable sensors for heart rate and skin conductance), motion tracking (computer vision using RGB camera input and infrared-based body/hand tracking), and vehicle telemetry (interior/exterior cameras, OBD) for data analysis and interactive, as well as adaptive systems
- **Open Science:** Proficient in open science practices, transparency, reproducibility, and accessibility; experienced in sharing data (example) via open-access platforms, using open-source tools, and contributing to community projects
- **Languages:** German (native), English (fluent), French (beginner).

MAJOR PUBLICATIONS (CHI, IMWUT, UIST, TOCHI)

ACM CHI/IMWUT/UIST/TOCHI are widely recognized as the premier venues for publishing research in the field of HCI. They are highly competitive, with acceptance rates typically ranging between 20-25%.
